

Learning Outcomes

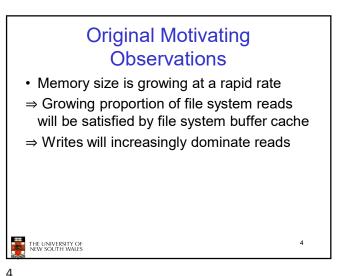

- An understanding of the performance of Inodebased files systems when writing small files.
- An understanding of how a log structured file system can improve performance, and increase reliability via improved consistency guarantees without the need for file system checkers.
- An understanding of "cleaning" and how it might detract from performance.

3

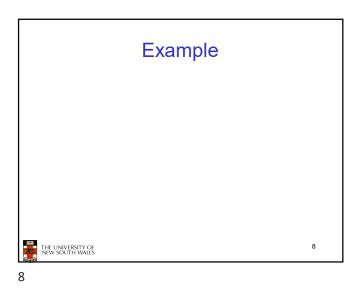

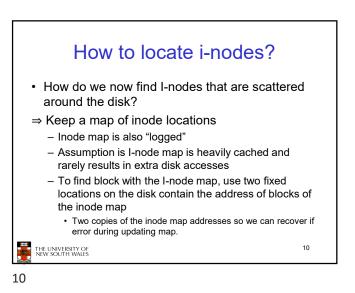

- Consistency checking required for ungraceful shutdown due to potential for sequence of updates to have only partially completed.
- File system consistency checkers are time consuming for large disks.
- Unsatisfactory boot times where consistency checking is required.

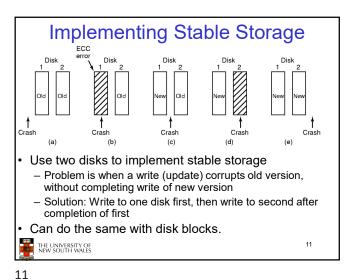

THE UNIVERSITY OF NEW SOUTH WALES

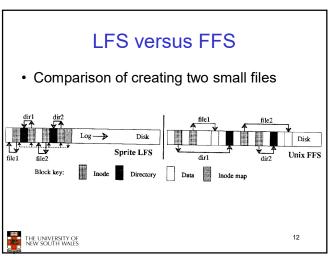

Basic Idea!!!
 Buffer sequence of updates in memory and write all updates sequentially to disk in one go.
Data Inode Dir Meta- Data

Observations

· For files of less than 64 KB, performance

• At 64 KB, files are composed of multiple

• In the range between 64 KB and 2 MB,

- because FFS is seeking between cylinder

26

is comparable in all the file systems.

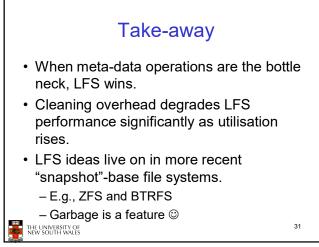

clusters and seek penalties rise.

groups to distribute data evenly.

LFS performance dominates

Journaling file systems

- · Hybrid of
 - I-node based file system
 - Log structured file system (journal)
- Two variations
 - log only meta-data to journal (default)log-all to journal
- Need to write-twice (i.e. copy from journal to inode based files)
- Example ext3

- Main advantage is guaranteed meta-data consistency
