Arrays

Suppose I need to compute statistics on class marks?

```c
int mark_student0, mark_student1, mark_student2,
    mark_student0 = 73;
mark_student1 = 42;
mark_student2 = 99;
...
```

- cumbersome, need hundreds of individual variables
- can’t write while loop which executes for each student
- becomes unfeasible if dealing with a lot of values

**Solution** use an array

```c
int mark[930];
mark[0] = 73;
mark[1] = 42;
mark[2] = 99;
...
```

C Arrays

- C array is a collection of variables called **array elements**.
- All array elements must be the same type.
- Array elements don’t have a name
- Array elements accessed by a number called the **array index**.
- Valid array indices for array with \( n \) elements are \( 0 \ldots n - 1 \)
- Array can have millions/billions of elements.
- Array elements must be initialized.
- Can’t assign scanf/printf whole arrays.
- Can assign scanf/printf array elements.
Arrays

// Declare an array with 10 elements and initialises all elements to 0.
int myArray[10] = {0};

// Put some values into the array.
myArray[0] = 3;
myArray[5] = 17;
myArray[10] = 42;  // <-- Error

Reading Arrays

Scanf can't read an entire array. This will read only 1 number:

```c
#define ARRAY_SIZE 42
...
int array[ARRAY_SIZE];
scanf("%d", &array);
```

Instead you must read the elements one by one:

```c
i = 0;
while (i < SIZE) {
    scanf("%d", &array[i]);
    i = i + 1;
}
```
Printing Arrays

printf can't print an entire array. This won't compile:

```c
#define ARRAY_SIZE 42
...
int array[ARRAY_SIZE];
printf("%d", array);
```

Instead must print the elements one by one:

```c
i = 0;
while (i < ARRAY_SIZE) {
    printf("%d\n", array[i]);
    i = i + 1;
}
```

Copying Arrays

Suppose we have the following:

```c
int array1[5] = {1, 2, 3, 4, 5};
int array2[5];
```

Array assignment not allowed in C. This won't compile:

```c
array2 = array1;
```

Instead must must copy the elements one by one:

```c
i = 0;
while (i < 5) {
    array2[i] = array1[i];
    i = i + 1;
}
```

Copying Arrays

Suppose we have the following:

```c
int array1[5] = {1, 2, 3, 4, 5};
int array2[5];
```

Array assignment not allowed in C. This won't compile:

```c
array2 = array1;
```

Instead must must copy the elements one by one:

```c
i = 0;
while (i < 5) {
    array2[i] = array1[i];
    i = i + 1;
}
```

Arrays of Arrays

- C supports arrays of arrays.
- Useful for multi-dimensional data.

```c
int matrix[3][3] = {{1, 2, 3},
                   {4, 5, 6},
                   {7, 8, 9}};
```

```c
printf("%d\n", matrix[1][1]);
```
Read a Two-dimensional Array

```c
#define SIZE 42
...
int matrix[SIZE][SIZE];
int i, j;
i = 0
while (i < SIZE) {
j = 0;
while (j < SIZE) {
    scanf("%d", &matrix[i][j]);
    j = j + 1;
}
i = i + 1;
}
```

Print a Two-dimensional Array

```c
...
while (i < SIZE) {
j = 0;
while (j < SIZE) {
    printf("%d", &matrix[i][j]);
    j = j + 1;
}
printf("\n");
i = i + 1;
}
```
