

- 'get them going'
 - Simpler to implement
 - Avoids concurrency issues by not sharing
 - Scales no shared serial sections
 - Modern analogy, virtualisation in the cloud.

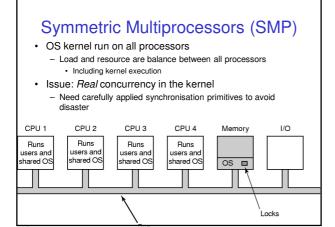

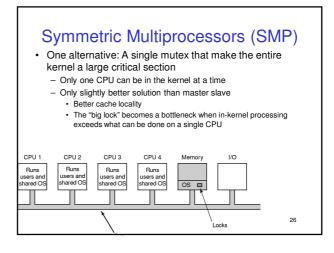

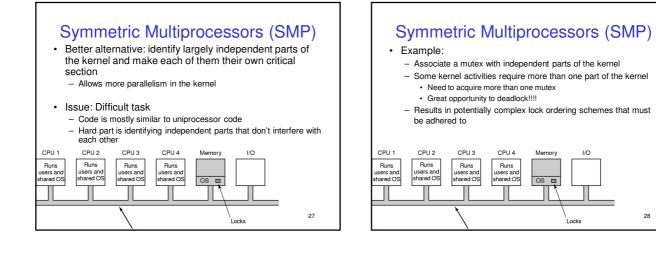

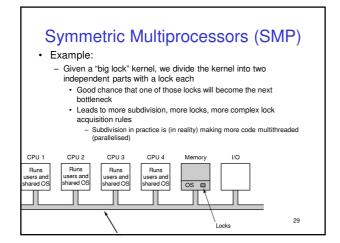

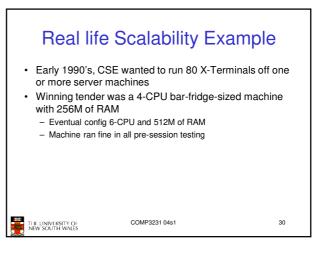

I/O

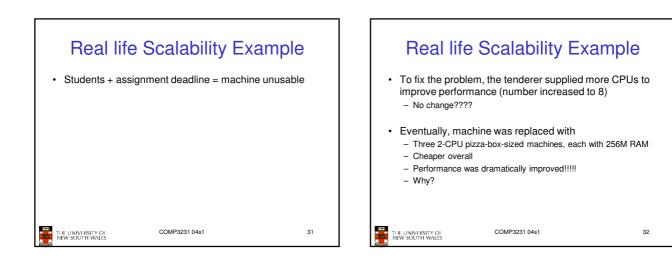

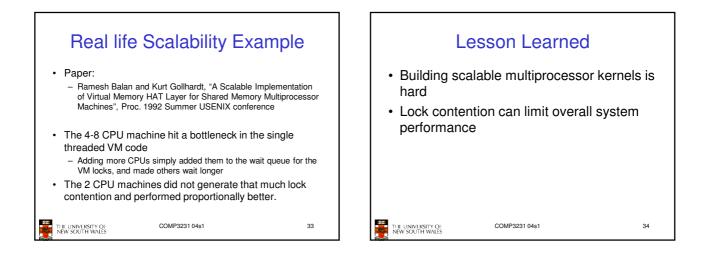

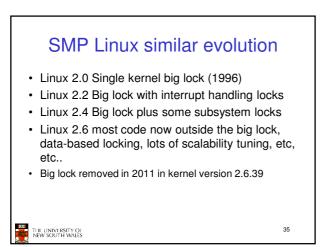

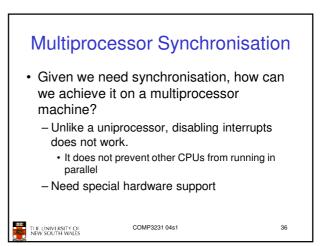

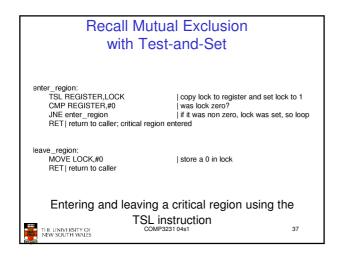

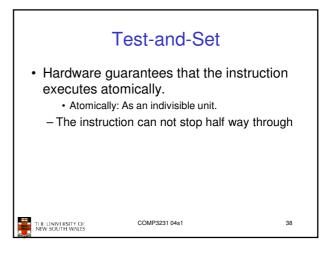

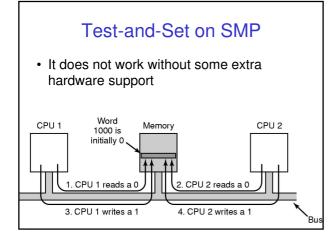

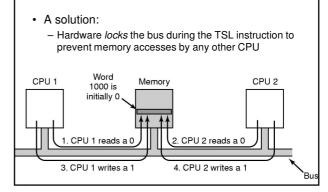

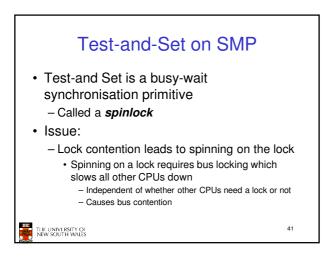

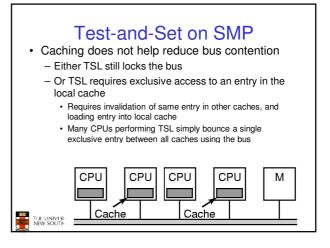

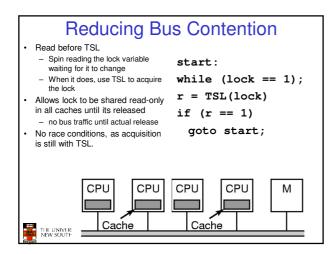

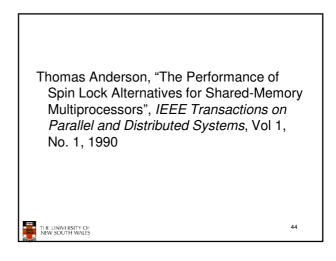

Test-and-Set on SMP

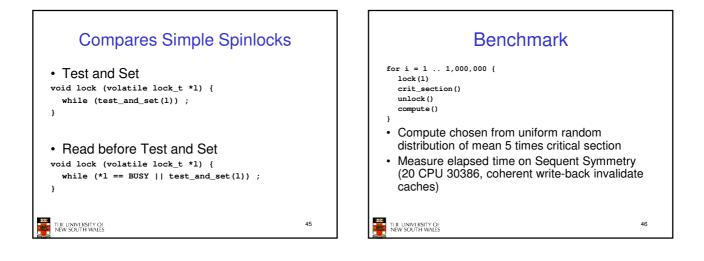

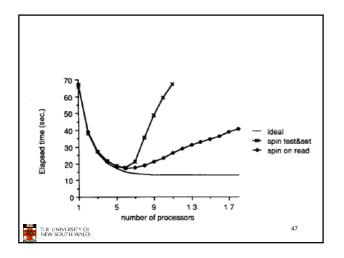

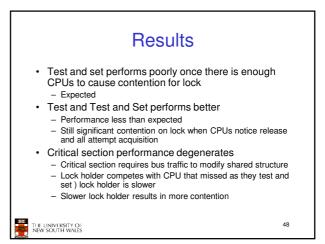

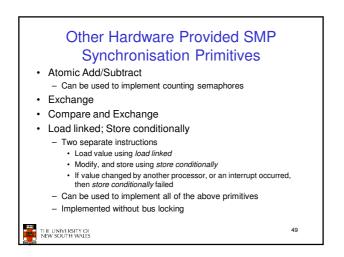

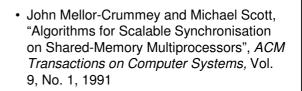

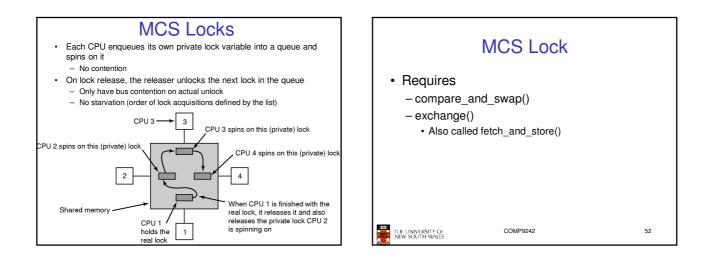

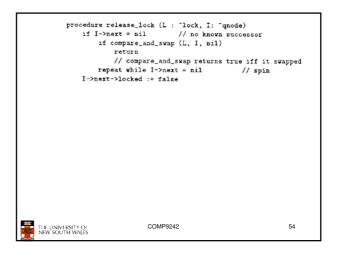

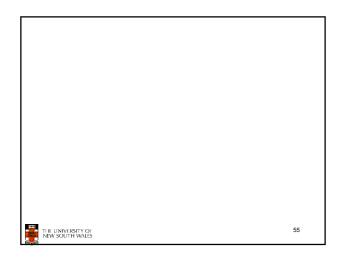

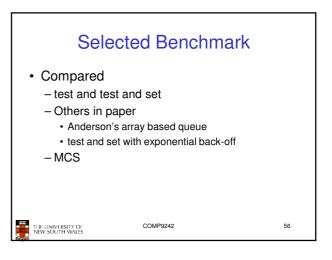

THE UNIVERSITY OF NEW SOUTH WALES

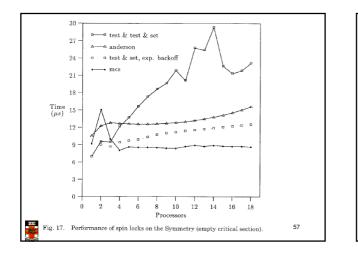

type qnode = recor next : ^qnode locked : Boole type lock = ^qnode	an	ode record allocated
<pre>// parameter I, below, points to a qnode record allocated // (in an enclosing scope) in shared memory locally-accessible // to the invoking processor</pre>		
<pre>procedure acquire_lock (L : 'lock, I : 'qnode) I->next := n:1 predecessor : 'qnode := fetch_and_store (L, I) if predecessor != nil // queue was non-empty I->locked := true predecessor->next := I repeat while I->locked // spin</pre>

Multiprocessor Scheduling

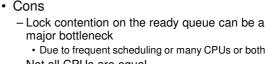

- Given X processes (or threads) and Y CPUs,
 - how do we allocate them to the CPUs

A Single Shared Ready Queue · When a CPU goes idle, it take the highest priority process from the shared ready queue 0 1 2 3 0 1 2 3 0 1 2 3 4 5 6 7 A 5 6 7 A 5 6 7 CPU CPI 12 CPU 41 8 9 10 11 8 9 10 11 8 9 10 11 goes idle 12 13 14 15 12 13 14 15 B 13 14 15 Prio Priority Ē Õ© A G-B D-R 0-00-00 \odot ∩-M

THE UNIVERSITY OF NEW SOUTH WALES

Fros No lock contention on per-CPU ready queues in the (hopefully) common case Load balancing to avoid idle queues Automatic affinity to a single CPU for more cache friendly behaviour
