

Multi-core Processor

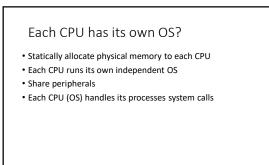

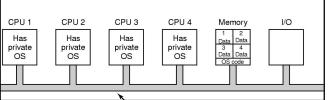

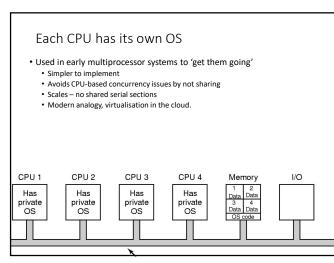

## Question

How do we construct an OS for a multiprocessor?
What are some of the issues?

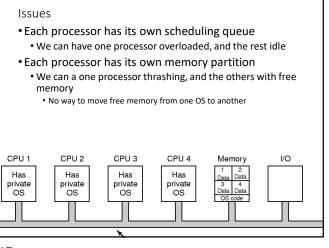

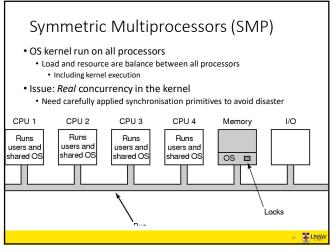

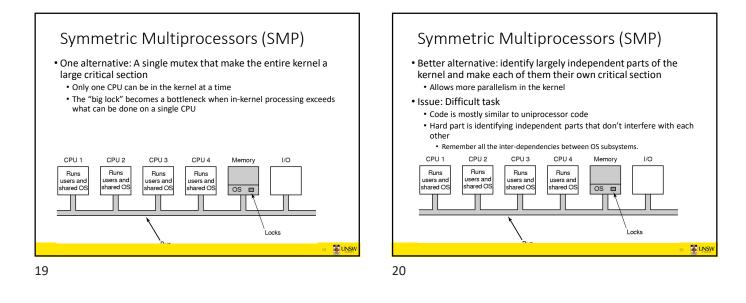

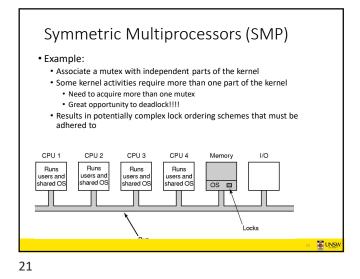

UNS

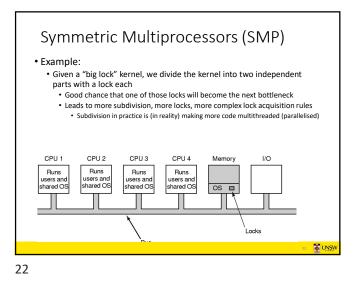

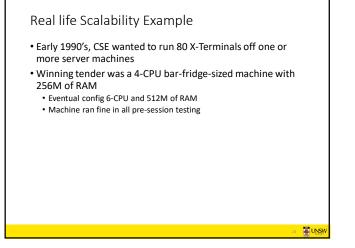

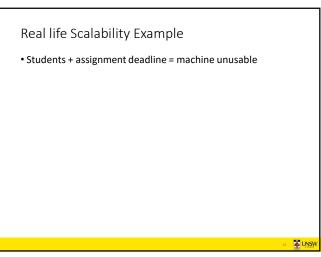

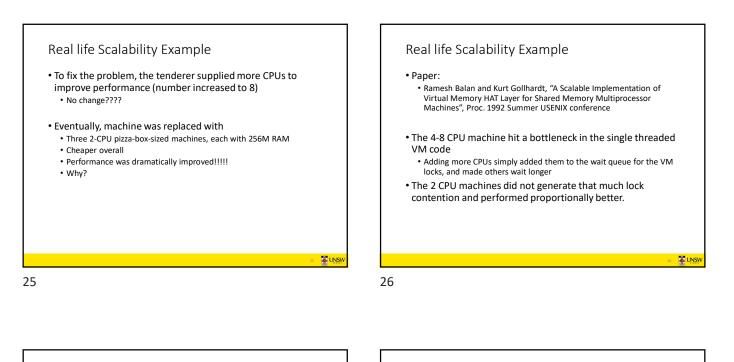

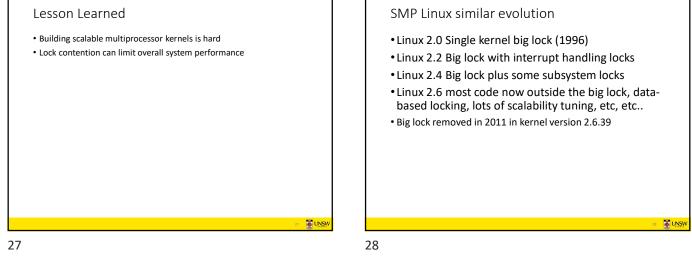

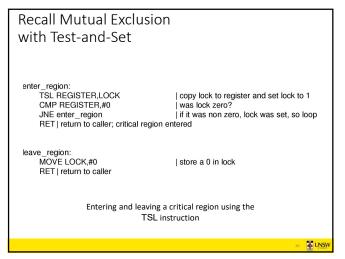

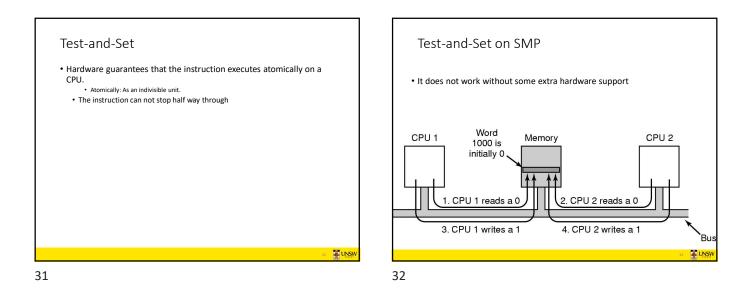

mı •	ren we need synchronisation, how can we achieve it on a litiprocessor machine? Unlike a uniprocessor, disabling interrupts does not work. • It does not prevent other CPUs from running in parallel Need special hardware support		
		29	UNSW

Test-and-Set on SMP

Causes bus contention

• Called a *spinlock* 

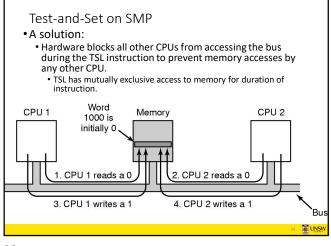

Issue:

• Test-and Set is a busy-wait synchronisation primitive

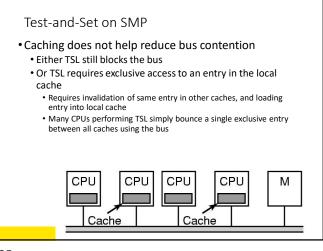

Independent of whether other CPUs need a lock or not

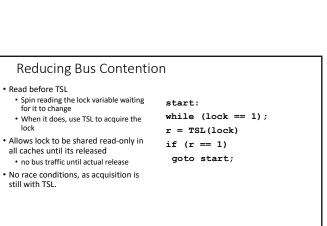

Spinning on a lock requires blocking the bus which slows all other CPUs down

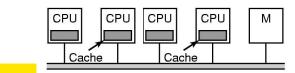

Lock contention leads to spinning on the lock

34

🗸 UNS

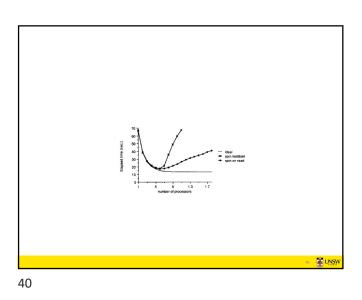

## Compares Simple Spinlocks

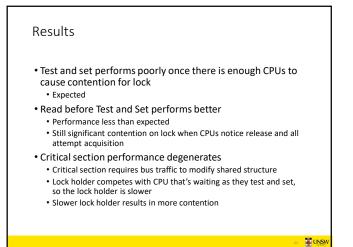

```
•Test and Set
void lock (volatile lock_t *1) {
  while (test_and_set(1)) ;
}
•Read before Test and Set
void lock (volatile lock_t *1) {
  while (*1 == BUSY || test_and_set(1)) ;
}
```

Benchmark for i = 1 .. 1,000,000 { lock(1) crit\_section() unlock() compute () } • Compute chosen from uniform random distribution of mean 5 times critical section • Measure elapsed time on Sequent Symmetry (20 CPU 30386, coherent write-back invalidate caches)
