

Compiler Register Conventions

Reg No	Name	Used for			
0	zero	Always returns 0			
1	at	(assembler temporary) Reserved for use by assembler			
2-3	v0-v1	Value (except FP) returned by subroutine			
4-7	a0-a3	(arguments) First four parameters for a subroutine			
8-15	t0-t7	(temporaries) subroutines may use without saving			
24-25	t8-t9				
16-23	s0-s7	Subroutine "register variables"; a subroutine which will write one of these must save the old value and restore it before it exits, so the <i>calling</i> routine sees their values preserved.			
26-27	k0-k1	Reserved for use by interrupt/trap handler - may change under your feet			
28	gp	global pointer - some runtime systems maintain this to give easy access to (some) "static" or "extern" variables.			
29	sp	stack pointer			
30	s8∕fp	9th register variable. Subroutines which need one can use this as a "frame pointer".			
31	ra	Return address for subroutine			

Simple factorial
