

**NICTA** 

[1]

 $[2,3,4^a]$ 

 $[5,6^b,7]$ 

 $[8,9,10^c]$ 

[21<sup>g</sup>,22,23]

Rough timeline

#### **COMP 4161**

NICTA Advanced Course

## **Advanced Topics in Software Verification**

Gerwin Klein, June Andronick, Toby Murray

Slide 1

# → Intro & motivation, getting started → Foundations & Principles • Lambda Calculus, natural deduction • Higher Order Logic

Content

Term rewriting

→ Proof & Specification Techniques
 Isar [11,12<sup>d</sup>]
 Inductively defined sets, rule induction [13°,15]
 Datatypes, recursion, induction [16,17<sup>f</sup>,18,19]
 Calculational reasoning, mathematics style proofs [20]

 $^a$ a1 out;  $^b$ a1 due;  $^c$ a2 out;  $^d$ a2 due;  $^c$ session break;  $^f$ a3 out;  $^g$ a3 due

Hoare logic, proofs about programs

Slide 2

# **DATATYPES IN ISAR**

#### Slide 3

## Datatype case distinction

```
\begin{array}{ll} \mathbf{proof} \ (\mathsf{case} \ term) & \\ & \mathbf{case} \ \mathsf{Constructor}_1 \\ \vdots \\ & \mathbf{next} \\ \vdots \\ & \mathbf{next} \\ & \mathbf{case} \ (\mathsf{Constructor}_k \ \vec{x}) \\ & \cdots \ \vec{x} \ \cdots \\ & \mathbf{qed} \\ \\ & \mathbf{case} \ (\mathsf{Constructor}_i \ \vec{x}) \ \equiv \\ & \mathbf{fix} \ \vec{x} \ \mathbf{assume} \ \mathsf{Constructor}_i \ \vdots "term = \mathsf{Constructor}_i \ \vec{x}" \end{array}
```

Slide 4

2

```
Structural induction for type nat
```

```
\begin{array}{lll} \mathbf{show} \; P \; n \\ & \mathbf{proof} \; (\mathsf{induct} \, n) \\ & \mathbf{case} \; 0 & \equiv \; \mathbf{let} \; ? case = P \; 0 \\ & \dots & \\ & \mathbf{show} \; ? case \\ & \mathbf{next} \\ & \mathbf{case} \; (\mathsf{Suc} \, n) & \equiv \; \mathbf{fix} \; n \; \mathbf{assume} \; \mathsf{Suc:} \; P \; n \\ & \dots & \\ & \dots & \vdots \\ & \cdots \; n \; \cdots \\ & \mathbf{show} \; ? case \\ & \mathbf{qed} \end{array}
```

#### Slide 5

## Structural induction with $\Longrightarrow$ and $\bigwedge$

```
show "\bigwedge x. A n \Longrightarrow P n"
proof (induct n)
                                  \equiv fix x assume 0: "A 0"
  case 0
                                      let ?case = "P 0"
  show ?case
next
  case (Suc n)
                                  \equiv fix n and x
                                      assume Suc: "\bigwedge x. A n \Longrightarrow P n"
  . . .
                                                      "A (Suc n)"
  \cdots n \cdots
                                      let ?case = "P (Suc n)"
  \mathbf{show}\ ? case
qed
```

Slide 6

**DEMO: DATATYPES IN ISAR** 

Slide 7

O • NICTA

**DEMO: REGULAR EXPRESSIONS** 

Slide 8

3

## We have seen today ...

- → Datatypes in Isar
- → Defining regular wxpressions as a data type
- → Playing with recursion and induction

Slide 9
