**COMP 4161**  
NICTA Advanced Course

**Advanced Topics in Software Verification**

Gerwin Klein, June Andronick, Toby Murray, Rafal Kolanski

**Slide 1**

---

**Content**

- Intro & motivation, getting started [1]
- Foundations & Principles
  - Lambda Calculus, natural deduction [1,2]
  - Higher Order Logic [3]
  - Term rewriting [4<sup>a</sup>]
- Proof & Specification Techniques
  - Inductively defined sets, rule induction [5]
  - Datatypes, recursion, induction [6<sup>b</sup>, 7]
  - Code generation, type classes [7]
  - Hoare logic, proofs about programs, refinement [8,9<sup>c</sup>,10<sup>d</sup>]
  - Isar, locales [11,12]

<sup>a</sup>a1 due; <sup>b</sup>a2 due; <sup>c</sup>session break; <sup>d</sup>a3 due

**Slide 2**

---

**Last Time**

- Conditional term rewriting
- Case Splitting with the simplifier
- Congruence rules
- AC Rules
- Knuth-Bendix Completion (Waldmeister)
- Orthogonal Rewrite Systems

**Slide 3**

---

**SPECIFICATION TECHNIQUES: SETS**

**Slide 4**

## Sets in Isabelle

Type 'a set: sets over type 'a

- $\{\}, \{e_1, \dots, e_n\}, \{x. P x\}$
- $e \in A, A \subseteq B$
- $A \cup B, A \cap B, A - B, \neg A$
- $\bigcup x \in A. B x, \bigcap x \in A. B x, \bigcap A, \bigcup A$
- $\{i..j\}$
- $\text{insert} :: \alpha \Rightarrow \alpha \text{ set} \Rightarrow \alpha \text{ set}$
- $f'A \equiv \{y. \exists x \in A. y = f x\}$
- ...

Slide 5

## Proofs about Sets

Natural deduction proofs:

- equality:  $\llbracket A \subseteq B; B \subseteq A \rrbracket \Longrightarrow A = B$
- subset:  $\llbracket \bigwedge x. x \in A \Longrightarrow x \in B \rrbracket \Longrightarrow A \subseteq B$
- ... (see Tutorial)

Slide 6

## Bounded Quantifiers

- $\forall x \in A. P x \equiv \forall x. x \in A \longrightarrow P x$
- $\exists x \in A. P x \equiv \exists x. x \in A \wedge P x$
- ball:  $\llbracket \bigwedge x. x \in A \Longrightarrow P x \rrbracket \Longrightarrow \forall x \in A. P x$
- bspec:  $\llbracket \forall x \in A. P x; x \in A \rrbracket \Longrightarrow P x$
- bexI:  $\llbracket P x; x \in A \rrbracket \Longrightarrow \exists x \in A. P x$
- bexE:  $\llbracket \exists x \in A. P x; \bigwedge x. \llbracket x \in A; P x \rrbracket \Longrightarrow Q \rrbracket \Longrightarrow Q$

Slide 7

## DEMO: SETS

Slide 8

## The Three Basic Ways of Introducing Types

### → **typedcl**: by name only

Example: **typedcl** names  
Introduces new type *names* without any further assumptions

### → **type\_synonym**: by abbreviation

Example: **type\_synonym**  $\alpha$  *rel* = " $\alpha \Rightarrow \alpha \Rightarrow \text{bool}$ "  
Introduces abbreviation *rel* for existing type  $\alpha \Rightarrow \alpha \Rightarrow \text{bool}$   
Type abbreviations are immediately expanded internally

### → **typedef**: by definition as a set

Example: **typedef** *new\_type* = "{some set}" <proof>  
Introduces a new type as a subset of an existing type.  
The proof shows that the set on the rhs is non-empty.

Slide 9

## How typedef works

Slide 11

## How typedef works

Slide 10

## Example: Pairs

$(\alpha, \beta)$  Prod

- ① Pick existing type:  $\alpha \Rightarrow \beta \Rightarrow \text{bool}$
- ② Identify subset:  
 $(\alpha, \beta)$  Prod =  $\{f, \exists a b. f = \lambda(x :: \alpha) (y :: \beta). x = a \wedge y = b\}$
- ③ We get from Isabelle:
  - functions Abs\_Prod, Rep\_Prod
  - both injective
  - Abs\_Prod (Rep\_Prod  $x$ ) =  $x$
- ④ We now can:
  - define constants Pair, fst, snd in terms of Abs\_Prod and Rep\_Prod
  - derive all characteristic theorems
  - forget about Rep/Abs, use characteristic theorems instead

Slide 12

## DEMO: INTRODUCING NEW TYPES

Slide 13

## INDUCTIVE DEFINITIONS

Slide 14

## Example

$$\frac{}{\langle \text{skip}, \sigma \rangle \rightarrow \sigma} \quad \frac{\llbracket e \rrbracket \sigma = v}{\langle x := e, \sigma \rangle \rightarrow \sigma[x \mapsto v]}$$

$$\frac{\langle c_1, \sigma \rangle \rightarrow \sigma' \quad \langle c_2, \sigma' \rangle \rightarrow \sigma''}{\langle c_1; c_2, \sigma \rangle \rightarrow \sigma''}$$

$$\frac{\llbracket b \rrbracket \sigma = \text{False}}{\langle \text{while } b \text{ do } c, \sigma \rangle \rightarrow \sigma}$$

$$\frac{\llbracket b \rrbracket \sigma = \text{True} \quad \langle c, \sigma \rangle \rightarrow \sigma' \quad \langle \text{while } b \text{ do } c, \sigma' \rangle \rightarrow \sigma''}{\langle \text{while } b \text{ do } c, \sigma \rangle \rightarrow \sigma''}$$

Slide 15

## What does this mean?

- $\langle c, \sigma \rangle \rightarrow \sigma'$  fancy syntax for a relation  $(c, \sigma, \sigma') \in E$
- relations are sets:  $E :: (\text{com} \times \text{state} \times \text{state}) \text{ set}$
- the rules define a set inductively

## But which set?

Slide 16

## Simpler Example

$$\frac{}{0 \in \mathbb{N}} \quad \frac{n \in \mathbb{N}}{n+1 \in \mathbb{N}}$$

- $\mathbb{N}$  is the set of natural numbers  $\mathbb{N}$
- But why not the set of real numbers?  $0 \in \mathbb{R}, n \in \mathbb{R} \implies n+1 \in \mathbb{R}$
- $\mathbb{N}$  is the **smallest** set that is **consistent** with the rules.

### Why the smallest set?

- Objective: **no junk**. Only what must be in  $X$  shall be in  $X$ .
- Gives rise to a nice proof principle (rule induction)
- Alternative (greatest set) occasionally also useful: coinduction

Slide 17

## Rule Induction

$$\frac{}{0 \in \mathbb{N}} \quad \frac{n \in \mathbb{N}}{n+1 \in \mathbb{N}}$$

induces induction principle

$$[P\ 0; \wedge n. P\ n \implies P\ (n+1)] \implies \forall x \in \mathbb{N}. P\ x$$

Slide 18

## We have learned today ...

- Sets
- Type Definitions
- Inductive Definitions

## DEMO: INDUCTIVE DEFINITIONS
