

COMP4317: XML & Database

Tutorial 5: Database => XML

Week 6

Thang Bui @ CSE.UNSW

What are your tablenamees?

```
mysql> SHOW TABLES;
+-----+
| Tables_in_student |
+-----+
| test               |
| z1234567_book_attr |
| z1234567_book_tbl  |
| z3168150_book_attr |
| z3168150_book_tbl  |
+-----+
5 rows in set (0.00 sec)

mysql>
```

What are your tablenamees?

```
mysql> SHOW TABLES LIKE 'z1234567%';
```

```
+-----+
```

```
| Tables_in_student (z1234567%) |
```

```
+-----+
```

```
| z1234567_book_attr          |
```

```
| z1234567_book_tbl          |
```

```
+-----+
```

```
2 rows in set (0.00 sec)
```

```
mysql>
```

Create your table

```
mysql> CREATE TABLE test(id INTEGER);  
ERROR 1050 (42S01): Table 'test' already exists  
  
mysql>
```

Create your table

```
mysql> DROP TABLE IF EXISTS test;  
Query OK, 0 rows affected (0.00 sec)
```

```
mysql> CREATE TABLE test(id INTEGER);  
Query OK, 0 rows affected (0.08 sec)
```

```
mysql>
```

NULL vs Empty in Database

```
mysql> INSERT INTO table1(id, name) VALUES (1,"null");
mysql> INSERT INTO table1(id, name) VALUES (2,"");
mysql> INSERT INTO table1(id, name) VALUES (3,null);
mysql> INSERT INTO table1(id, name) VALUES (4,"NULL");
mysql> SELECT * FROM table1;
```

```
+-----+-----+
| id    | name  |
+-----+-----+
|      1 | null  |
|      2 |       |
|      3 | NULL  |
|      4 | NULL  |
+-----+-----+
```

NULL vs Empty in Database

```
mysql> INSERT INTO table1(id, name) VALUES (1, "null");
mysql> INSERT INTO table1(id, name) VALUES (2, "");
mysql> INSERT INTO table1(id, name) VALUES (3, null);
mysql> INSERT INTO table1(id, name) VALUES (4, "NULL");
mysql> SELECT * FROM table1;
```

```
+-----+-----+
| id    | name  |
+-----+-----+
| 1     | null  |
| 2     |      |
| 3     | NULL  |
| 4     | NULL  |
+-----+-----+
```

Just the display! No memory for that

NULL vs Empty in Database

```
mysql> SELECT * FROM table1 ORDER BY name;
```

```
+-----+-----+
```

```
| id   | name |
```

```
+-----+-----+
```

```
|    3 | NULL |
```

NULL first

```
|    2 |     |
```

Empty next

```
|    1 | null |
```

```
|    3 | NULL |
```

"null" < "NULL"

```
+-----+-----+
```

Tables & Tree

pre	attr_name	attr_value
1	isbn	1-2345-6789-0
1	year	1994
9	currency	USD

pre	post	level	tag	text
1	10	1	book	null
2	2	2	title	null
3	1	3	null	ICP/IP Illustrated
4	7	2	author	null
5	4	3	last	null
6	3	4	null	Steven
7	6	3	first	null
8	5	4	null	W.
9	9	2	price	null
10	8	3	null	65.95

Tables & Tree

Tables -> Tree

- Features
 - `child.pre > parent.pre`
 - `child.post < parent.post`
 - `child.level > parent.level`

Tables -> Tree

- A simple algorithm
 - Given LP = an order (on pre) list of $\langle \text{pre}, \text{post} \rangle$ pairs
 - For every $lp = \langle \text{pre}, \text{post} \rangle$ in LP
 - Make a node t (pre, post)
 - Find the “nearest” node p such that $p.\text{pre} < t.\text{pre}$ and $p.\text{post} > t.\text{post}$
 - If such a node, $p.\text{addChild}(t)$

Tables -> Tree

- A simple algorithm
 - Given LP = an order (on pre) list of $\langle \text{pre}, \text{post} \rangle$ pairs
 - For every $lp = \langle \text{pre}, \text{post} \rangle$ in LP
 - Make a node t (pre, post)
 - Find the “nearest” node p such that $p.\text{pre} < t.\text{pre}$ and $p.\text{post} > t.\text{post}$
 - If such a node, $p.\text{addChild}(t)$

“level” may help?

Tables -> Tree

LP = {<4,7,author>, <5,4,last>, <6,3,Steven>, <7,6,first>, <8,5,W.>}

1. lp = <4,7,author>

=> make a first node

Tables -> Tree

LP = {<4,7,author>, <5,4,last>, <6,3,Steven>, <7,6,first>, <8,5,W.>}

1. lp = <4,7,author>

2. lp = <5,4,last>

=> make a node t

=> find the "nearest" node p:

p.pre < 5 and p.post > 4

=> p.addChild(t)

Tables -> Tree

LP = {<4,7,author>, <5,4,last>, <6,3,Steven>, <7,6,first>, <8,5,W.>}

1. lp = <4,7,author>
2. lp = <5,4,last>
3. lp = <6,3,Steven>
=> make a node t
=> find the "nearest" node p
p.pre < 6 and p.post > 3

Tables -> Tree

LP = {<4,7,author>, <5,4,last>, <6,3,Steven>, <7,6,first>, <8,5,W.>}

1. lp = <4,7,author>

2. lp = <5,4,last>

3. lp = <6,3,Steven>

4. lp = <7,6,first>

=> make a node t

=> find the "nearest" node p

p.pre < 7 and p.post > 6

=> p.addChild(t)

Tables -> Tree

LP = {<4,7,author>, <5,4,last>, <6,3,Steven>, <7,6,first>, <8,5,W.>}

1. lp = <4,7,author>

2. lp = <5,4,last>

3. lp = <6,3,Steven>

4. lp = <7,6,first>

5. lp = <8,5,W.>

=> make a node t

=> find the "nearest" node p

p.pre < 8 and p.post > 5

=> p.addChild(t)

Another Algorithm

- pre-order: $\langle 1,10 \rangle \langle 2,2 \rangle \langle 3,1 \rangle \langle 4,7 \rangle \langle 5,4 \rangle \langle 6,3 \rangle \langle 7,6 \rangle \langle 8,5 \rangle \langle 9,9 \rangle \langle 10,8 \rangle$
- post-order: $\langle 3,1 \rangle \langle 2,2 \rangle \langle 6,3 \rangle \langle 5,4 \rangle \langle 8,5 \rangle \langle 7,6 \rangle \langle 4,7 \rangle \langle 10,8 \rangle \langle 9,9 \rangle \langle 1,10 \rangle$

Another Algorithm

■ pre-order: $\langle 1,10 \rangle \langle 2,2 \rangle \langle 3,1 \rangle \langle 4,7 \rangle \langle 5,4 \rangle \langle 6,3 \rangle \langle 7,6 \rangle \langle 8,5 \rangle \langle 9,9 \rangle \langle 10,8 \rangle$

■ post-order: $\langle 3,1 \rangle \langle 2,2 \rangle \langle 6,3 \rangle \langle 5,4 \rangle \langle 8,5 \rangle \langle 7,6 \rangle \langle 4,7 \rangle \langle 10,8 \rangle \langle 9,9 \rangle \langle 1,10 \rangle$

Another Algorithm

■ pre-order: $\langle 2,2 \rangle \langle 3,1 \rangle \langle 4,7 \rangle \langle 5,4 \rangle \langle 6,3 \rangle \langle 7,6 \rangle \langle 8,5 \rangle \langle 9,9 \rangle \langle 10,8 \rangle$

■ post-order: $\langle 3,1 \rangle \langle 2,2 \rangle \langle 6,3 \rangle \langle 5,4 \rangle \langle 8,5 \rangle \langle 7,6 \rangle \langle 4,7 \rangle \langle 10,8 \rangle \langle 9,9 \rangle$

Children of $\langle 2,2 \rangle$

On the right of $\langle 2,2 \rangle$

Another Algorithm

■ pre-order: $\langle 3,1 \rangle \langle 4,7 \rangle \langle 5,4 \rangle \langle 6,3 \rangle \langle 7,6 \rangle \langle 8,5 \rangle \langle 9,9 \rangle \langle 10,8 \rangle$

■ post-order: $\langle 3,1 \rangle$ $\langle 6,3 \rangle \langle 5,4 \rangle \langle 8,5 \rangle \langle 7,6 \rangle \langle 4,7 \rangle \langle 10,8 \rangle \langle 9,9 \rangle$

On the right of $\langle 2,2 \rangle$

Another Algorithm

■ pre-order: $\langle 4,7 \rangle \langle 5,4 \rangle \langle 6,3 \rangle \langle 7,6 \rangle \langle 8,5 \rangle \langle 9,9 \rangle \langle 10,8 \rangle$

■ post-order: $\langle 6,3 \rangle \langle 5,4 \rangle \langle 8,5 \rangle \langle 7,6 \rangle \langle 4,7 \rangle \langle 10,8 \rangle \langle 9,9 \rangle$

Children of $\langle 4,7 \rangle$

On the right of $\langle 4,7 \rangle$

Another Algorithm

- pre-order: $\langle 5,4 \rangle \langle 6,3 \rangle \langle 7,6 \rangle \langle 8,5 \rangle \langle 9,9 \rangle \langle 10,8 \rangle$

- post-order: $\langle 6,3 \rangle \langle 5,4 \rangle \langle 8,5 \rangle \langle 7,6 \rangle$

Children of $\langle 5,4 \rangle$

On the right of $\langle 5,4 \rangle$

$\langle 10,8 \rangle \langle 9,9 \rangle$

On the right of $\langle 4,7 \rangle$

Another Algorithm

- pre-order: $\langle 6,3 \rangle \langle 7,6 \rangle \langle 8,5 \rangle \langle 9,9 \rangle \langle 10,8 \rangle$

- post-order: $\langle 6,3 \rangle$

$\langle 8,5 \rangle \langle 7,6 \rangle$

On the right of $\langle 5,4 \rangle$

$\langle 10,8 \rangle \langle 9,9 \rangle$

On the right of $\langle 4,7 \rangle$

Another Algorithm

- pre-order: $\langle 7,6 \rangle \langle 8,5 \rangle \langle 9,9 \rangle \langle 10,8 \rangle$

- post-order: $\langle 8,5 \rangle \langle 7,6 \rangle$

Children of $\langle 7,6 \rangle$

$\langle 10,8 \rangle \langle 9,9 \rangle$

On the right of $\langle 4,7 \rangle$

Another Algorithm

- pre-order: $\langle 8,5 \rangle$ $\langle 9,9 \rangle$ $\langle 10,8 \rangle$

- post-order: $\langle 8,5 \rangle$

Another Algorithm

- pre-order: $\langle 9,9 \rangle \langle 10,8 \rangle$

- post-order: $\langle 10,8 \rangle \langle 9,9 \rangle$

Children of $\langle 9,9 \rangle$

Another Algorithm

The subroot

- pre-order: $\langle 10, 8 \rangle$

- post-order: $\langle 10, 8 \rangle$

Another Algorithm

- pre-order:
- post-order:

Tree -> XML

- Travel the tree
- Print as –p2 of assignment 1

Mind your tablename in -q option

- SELECT pre, post
 - FROM book_tbl
 - WHERE pre IN
 - (SELECT pre FROM book_attr
 - WHERE attr = 'isbn' AND value = '1-2345-6789-0')
-
- SELECT pre, post
 - FROM **z1234567_book_tbl**
 - WHERE pre IN
 - (SELECT pre FROM **z1234567_book_attr**
 - WHERE attr = 'isbn' AND value = '1-2345-6789-0')

Filename => Tablename

- XML2Rel -t testcases/book.xml
 - tablename: book_tbl, book_attr

Extract the filename only

- DO NOT use any default database, username, password in your program code
 - Receive them from the parameters
- We may create tables for many XML files before deleting them
 - Only retrieve and fix the necessary tablenameames.
 - Insert data from XML files a1.xml, a2.xml, a3.xml
 - Query data from table a1_tbl, a1_attr: fix names for a1
 - Query data from table a3_tbl, a3_attr: fix names for a3
 - Delete all data (remove all a/_tbl, a/_attr tables)
